ABSTRACT

A Comparative Analysis of Proposed Improvements in Aviation Education:
Nationwide Aviation Education Programs Versus Embry-Riddle Aeronautical University

by

Robert M. Kuhns, Ed.D.
and
Daniel E. Johnson, Ed.D.

This paper presents a comparison of findings related to a study of proposed improvements in four-year aviation education programs as indicated by nation-wide survey instruments conducted in the summer of 1993 and during a follow-on survey performed at Embry-Riddle Aeronautical University in early 1996. Aviation education program directors of four-year non-engineering collegiate aviation programs and faculty members throughout the Embry-Riddle Aeronautical University system were contacted to provide input as to methods of improving the quality of aviation education programs. Key information obtained was then paraphrased into a written instrument that was categorized in order of importance by the two different mailings. The "improvement of both faculty and teaching aids" and "to provide more student internships" were the most recommended improvements in this study. This paper provides multiple nationwide-ranked proposed improvements in aviation education, and describes peer-suggested methods of improving student attainment of knowledge, competency, and proficiency in aviation education.
Original Nationwide Aviation Education Study - 1993

Data were collected in the summer of 1993 to ascertain the perceived quality of four-year and higher aviation education programs throughout the nation. The following information was part of Robert Kuhns' doctoral thesis and additional research conducted by Daniel Johnson in 1996. The original study information was obtained from program coordinators, department heads, or similar individuals at the various institutions throughout the United States (N=68). The follow-on research was conducted throughout the Embry-Riddle Aeronautical University (ERAU) system consisting of regional faculty advisors and center directors (N=226). A copy of the telephone interview questionnaire is found in Appendix A. Objective and subjective data were obtained from program directors in this study. Demographics as well as opinions were acquired. Key factors concerning aviation education were then organized into a second instrument which may be found in Appendix B. Aviation department heads were mailed the instrument and asked to rank in importance the various key factors. This instrument became the basis for the ERAU study (see Appendix C).

The University Aviation Association (UAA) membership list was used to identify four-year and higher non-engineering aviation education programs offered in the United States. Aviation programs less than four years were not considered in this study. The UAA April 1992, Membership List contained the names of 106 member institutions of which 68 were found by the survey to offer four-year and greater aviation programs (University Aviation Association, 1992). In the process of calling all 106 member institutions an updated number (68) of institutions that offer four year and higher aviation education programs was obtained.

The first questionnaire requested information of both a quantitative nature and a subjective nature. Student number, faculty demographics, future educational plans, aviation equipment and facilities, intrastate student accessibility, and student recruiting were surveyed. More difficult questions were asked of the program/department chairs and included the following areas: program quality, ranking against a national norm, current program status, factors contributing to quality aviation education, and which institution was considered to offer the best aviation education program in the United States.

The second questionnaire asked aviation program directors to rank key quality factors from the most important to the least important. These key factors were obtained from the most frequent responses in the telephone interview questionnaire.

Operational Procedures

All of the 68 identified member institutions were contacted by phone to conduct a structured phone interview. Confidentiality was assured to all participants. All institutions were contacted a minimum of four times to maximize responses. If a program director was unable
to respond after four attempts, the institution was deleted from the survey. This was strictly random with no bias on the part of the telephone interviewer.

A telephone questionnaire technique allowed subjects to be more open in their responses, and if needed, to ask for clarification concerning questions. The telephone technique also encouraged more detailed responses and provided for greater participation than the mailed format questionnaires. This procedure may be considered successful if it has the 55 percent or greater success rate generally accepted by research authorities (Perry, 1988).

The telephone questionnaire was written and submitted for evaluation to the researcher's doctoral committee. The recommended changes were incorporated into a second draft which was then presented to experts in questionnaire design. Their modifications were adopted. The questionnaire was also presented to experts in English and Grammar at Wichita State University. Next, it was presented to several program directors at member institutions for their review. The final draft was again presented to the doctoral committee. A small pilot group was then selected and a phone interview was conducted. After several interviews, small changes were adapted to clarify and to improve understanding of the questionnaire. One additional question was also added (number 21) as per the suggestion of a member of the pilot group. The second (written) instrument underwent a similar process and was approved by the doctoral committee before it was mailed.

The pilot group consisted of a former director of an aviation education program, a member of a nationwide aviation study, and several of the doctoral committee members. The revised final drafts were then presented to the researcher's committee chairman for final approval. Developmental and validation processes were completed for this instrument.

Research Design and Analysis

The findings of this study, drawing on its qualitative and quantitative data, are presented in a descriptive design. Findings included program age, curriculum offered, future curricular plans, faculty demographics, equipment and aviation facilities, student recruitment, CAA membership, and follow-up of graduates. This information although obtained will not be presented in this paper. Subjective responses recorded on aviation program quality, factors that constitute a high quality aviation education program, and methods of improving quality of aviation education will be presented in this paper. Findings were organized in a descriptive and summarizing format to assure confidentiality to all participants.

Factors Contributing to the Quality of Aviation Education

One question asked of program directors in this survey was, "What factors do you feel constitute to a good aviation program?" The question was completely open ended. For brevity, similar responses were combined. The following factors, in order of number of times mentioned, are listed on the next page:
### Factors Associated with the Quality of Aviation Education

*Eight other responses recorded in the survey were mentioned only once, and are not listed in the above factors.

The next survey question asked the respondent to comment on factors that comprise a high quality aviation education. The question was, "What do you feel is necessary in order to provide excellence in Aviation Education?" This is similar to the preceding question, however the word excellence was emphasized by the interviewer. Some of the same responses occur in the next list, however it is interesting to note that many different responses were obtained when excellence was in fact substituted for good.

<table>
<thead>

</tbody>
</table>

- High Quality Faculty
- High Quality Facilities
- Networking with Aviation Industry
- Professional Program
- Conduct Research in Aviation
- Program contain Interested Students
- Adequate Funding of Program
- Professional Program
- Academic Support
- High Quality Aviation Program
- High Quality Facilties
- Networking with Aviation Industry
- High Quality Faculty

\*Eight other responses recorded in the survey were mentioned only once, and are not listed in the above factors.

### Fourth Annual College of Career Education Faculty Symposium on Teaching Effectiveness November 1996

Page 110
A Comparative Analysis of Proposed Improvements in Aviation Education: Nationwide Aviation Education Programs Versus Embry-Riddle Aeronautical University

Variety of Aviation Courses Offered
Student Oriented Faculty
Industry Involvement in Curriculum
Provide Job Placement Services
Greater Emphasis on Aviation Safety
Promote Critical Thinking Skills in Students
Provide Internships in Aviation Industry
Provide More Financial Aid To Students
Other Factors*

*Seven other responses recorded in the survey were mentioned only once, and are not listed in the above factors.

Program directors were then asked, "If you had unlimited resources, what three changes would you make in the Aviation Education program at your institution?"

The most answered response was to improve facilities. The following list describes the responses given:

Proposed Improvements in Aviation Education

(Listed in order of number of times cited)

Improvement of Facilities
Improvement and Addition of Flight Simulators
Increase Faculty Number
Increase number of Available Aircraft
Improve Teaching Aids
Increase number of Aviation Programs
Increase Student Recruitment
Increase Marketing Budget
Increase number of Hands On Activities
Provide More Student Internships
Increase Faculty Travel
Improve Student Placement System
Increase Industry Involvement
Add Masters Degree Program In Aviation
Increase Library Resources
Initiate Research Center
Increase Number of Field Trips
Offer Additional Scholarships
Increase Faculty Development Programs
Other Factors*

*Five other responses recorded in the survey were mentioned only once, and are not listed in the above factors.

The top 12 responses of each of the three preceding lists were then organized
into a written questionnaire (see appendix B) which was mailed to the UAA member institutions with four-year degree programs. These three questions were considered to be of greatest importance to establishing the norm of quality aviation education throughout the United States. The top 12 responses were chosen to make the ranking by the program directors less difficult. All responses that were recorded more than twice on the original survey were included. The ranking of each of the top 12 groups of responses in a written format allowed for both a reaffirmation of previous oral responses and the opportunity to rank the other respondent's opinions. Forty-two program directors returned the original survey representing a response rate of 61.8 percent.

Comparison of Original Study Results to the 1996 ERAU Survey

One hundred forty two Embry-Riddle faculty returned the second survey. This is a response rate of 62.8 percent. When asked to rank the factors of a high quality aviation education the following responses were obtained (see Table I). The following point system was employed to determine rank. When a factor was ranked first, twelve points were awarded to this factor. If that factor ranked second, eleven points were awarded. This system was applied down to the lowest rated factor, which received only one point. Using this method, rank can be established by noting the factor that obtains the highest number of points. The factors are also listed in order from highest to lowest as obtained in the original study. Responses were tabulated using the spreadsheet program Excel. The following table summarizes the responses (Table I).
A Comparative Analysis of Proposed Improvements in Aviation Education: Nationwide Aviation Education Programs Versus Embry-Riddle Aeronautical University

The survey responses indicated that a high quality faculty is the number one response by a large factor in both studies. This was the most cited factor and was ranked by the mail survey also as the number one factor. A good overall program was the second highest cited response, and it was also second highest in the mail survey. Results of both surveys are as follows.
Factors of High Quality Aviation Education Programs

(Top Six Responses Original Study)

High Quality Faculty
Good Overall Program
Student Oriented Faculty
High Quality Students
Academic Support
Professional Program

Factors of High Quality Aviation Education Programs

(Top Six Responses ERAU Study)

High Quality Faculty
Good Overall Program
Professional Program
Student Oriented Faculty
High Quality Students
Academic Support

Survey respondents were then asked to rank the necessary factors to provide excellence in aviation education. The following table provides the results by the use of the point system as previously described (Table II).
TABLE II

NECESSARY FACTORS TO PROVIDE EXCELLENCE IN AVIATION EDUCATION

</tbody>
</table>

"High quality faculty" was the number one ranked response in both surveys. The second highest cited response "student oriented faculty" was ranked fourth in the second survey. ERAU ranked the third choice of the original survey as their second. The top six necessary factors to provide excellence in aviation education in both surveys are as follows:
A Comparative Analysis of Proposed Improvements in Aviation Education: Nationwide Aviation Education Programs Versus Embry-Riddle Aeronautical University

Necessary Factors To Provide Excellence In Aviation Education

(Top Six Responses Original Study)

High Quality faculty
Student Oriented Faculty
High Quality Aviation Program
Adequate Funding of Program
Academic Support
Professional Program

Necessary Factors To Provide Excellence In Aviation Education

(Top Six Responses ERAU Study)

High Quality faculty
High Quality Aviation Program
Professional Program
Student Oriented Faculty
Adequate Funding of Program
Academic Support

Finally, program directors were asked to rank 12 proposed improvements in aviation education. The following table is based on the aforementioned point system and represents the rank order established by the mailed survey (see Table III).
A Comparative Analysis of Proposed Improvements in Aviation Education: Nationwide Aviation Education Programs Versus Embry-Riddle Aeronautical University

TABLE III

RECOMMENDED IMPROVEMENTS IN AVIATION EDUCATION

<td>905</td>
</tr>
</tbody>
</table>

An unexpected outcome of this study was that the number one ranked response "provide more student internships" in the original study fell to fifth place in the second study. The second study showed "improvement of teaching aids" as the number one ranked factor. The following list represents the top six ranked proposed improvements in aviation education obtained in both studies:
RECOMMENDED IMPROVEMENTS IN AVIATION EDUCATION

(Top ranked six factors Original Study)

Provide More Student Internships
Increase Faculty Number
Increase Number of Hands on Activities
Improve Teaching Aids
Improve Student Placement System
Improvement of Facilities

RECOMMENDED IMPROVEMENTS IN AVIATION EDUCATION

(Top ranked six factors ERAU Study)

Improve Teaching Aids
Increase Number of Hands on Activities
Increase Student Recruitment
Improvement of Facilities
Increase Marketing Budget
Provide More Student Internships

This study provided two peer-referenced national-based groups of proposed improvements in collegiate aviation education. It is the hope of the authors that this work will provide a basis for such improvements. Obviously, some improvements are more practical to initiate than others, however with the priorities as established in this study the program director may be guided in decisions involving improvements in educational quality.

AVIATION EDUCATION TELEPHONE SURVEY
Original Study (1993)

Institution name__________________________________________
Street Address____________________________________________
__________________________________________________________________________
Contact person_____________________________________________
Title__________________________ Phone________________________
Date__________________________ Time__________________________

1. What is the size of your parent institution?__________

2. How many Aviation education students are currently enrolled?
   AS______, BS______, MBA______, MS______,
   Ed.D.______, Ph.D.______,
   Other______ (if so, please specify)

3. What is the highest aviation degree offered?
   Circle one: AS   BS   MBA   MS   Ed.D   Ph.D

4. Within the next two years, does your institution plan to offer any higher level Aviation education degrees than presently offered? Yes______ No______. If yes what? (circle) BS, MBA, MS, Ed. D., Ph. D., Other ________________

5. What year was your aviation program established?_______

6. Faculty demographics:
   Number of full time aviation faculty__________
   Number of part time aviation faculty__________
   Number of minority aviation faculty__________
   Number of women aviation faculty__________
   Number of aviation faculty with degree higher than baccalaureate__________
   Number of aviation faculty with degree higher than masters__________
7. Using a scale of 1 to 5 with 5 being highest quality how would you rate your aviation program as compared to other similar programs? 1 2 3 4 5

8. How do you feel your aviation program would rate against a nationwide norm?
   - One of the best
   - Better than most
   - Average
   - Somewhat below the norm
   - One of the worst

9. Does your institution offer any aviation education scholarships? Yes No If so, what types?

10. Would you characterize your aviation education program as growing, remaining constant, or declining in student number? (circle one) What factors do you attribute this to?

11. What factors constitute a good Aviation Education program?

12. What do you feel is necessary in order to provide excellence in Aviation Education?
13. If you had unlimited resources, what three changes would you make in the Aviation Education program at your institution?

14. What options are available in your Aviation Education program? (Check those that apply)

Aviation Management Program
Flight Training
Aircraft and Powerplant Training
Airway Science:
  Airway Science Management
  Airway Computer Science
  Aircraft Systems Management
  Airway Electronic Systems
  Aviation Maintenance Management
Other

15. What institution in your opinion offers the best aviation education in the United States...

In four year programs?

At masters level or higher?

16. How would you rate your institution in relation to one or more of the preceding best institutions on a scale of 1-5 with 5 being the aforementioned institution? 1 2 3 4 5

17. How many of the following are available in your program?

  Flight training aircraft
  Flight training simulators
  Certified Flight instructors
  Certified Ground instructors
  Aviation Scholarships
18. Would you describe your program as being accessible to students from other states? Yes____ or No____. If yes, to what degree do you rate your institution's accessibility?

Very accessible____________________
Somewhat accessible____________________
Limited accessibility____________________

19. Do you actively recruit students? Yes ____ No ____.
If so, how? ________________________________

20. Do you follow-up on graduates? Yes ____ No ____.
If so, how frequently? ________________________________

21. Is your institution currently a member of The Council on Aviation Accreditation? Yes ____ No ____ Do you plan to join in the future? Yes ____ No ____
Early this summer I contacted you by phone to participate in my doctoral dissertation study about aviation education. Those of you that participated in the previous study provided me with some interesting results. Three key questions of the survey have been paraphrased below with their most frequent responses. Please rank (1-12) the responses in order of importance (1 being the most important) and return your response to me in the self addressed stamped envelope.

Statement: Factors of High Quality Aviation Education Program

Rank (in order of importance)

1. Concentration of Aviation Studies
2. Blend of Liberal Arts Curriculum
3. High Quality Faculty
4. Professional Program
5. High Quality Facilities

ERAU Survey (1996)

Dr. Daniel E. Johnson
North Central Regional Faculty Advisor
Embry-Riddle Aeronautical University
55 MSS/DPE, 106 Peacekeeper Drive, Ste 806
Offutt AFB, NE 68113-3214

December 26, 1995

Dear Colleague:

During the Third Annual Symposium on Teaching Effectiveness at the Extended Campus World-wide meeting last November, Dr. Rob Kuhns presented a paper entitled "Proposed Improvements in Collegiate Aviation Education." The study was based on a 1993 nation-wide survey of aviation education program directors of four-year non-engineering collegiate aviation programs. The research was divided into two primary parts. The first portion was the survey of aviation program directors mentioned above. The second part of the research project involved the ranking of various factors derived from the survey that comprise a quality aviation education. Dr. Flancher felt ERAU could benefit from this research and requested we replicate the second portion of the study in the Extended Campus and present the results at the 1996 World-wide Conference.

From the initial nation-wide survey of aviation education program directors, three key questions provided the data for the second part of the research. The most frequent responses from these key questions are paraphrased below. Please rank (1-12) the responses in order of importance (1 being the most important) and return your response to us in the enclosed self-addressed stamped envelope.
