Blurring the Lines

Dr. Ruth Stilwell
International Federation of Air Traffic Controllers' Associations
The line between aviation and space is no longer clear new technologies, new operational concepts, and commercialization of space operations requires new thinking about how we distinguish between the two.
DEMARCATION

- AIR AND SPACE POLICY HAVE EVOLVED INDEPENDENTLY
  - IS A DEMARCATION POSSIBLE. NECESSARY. OR APPROPRIATE MOVING FORWARD?
    - OPERATIONAL OR VERTICAL?
    - NEW CHALLENGES FROM COMMERCIALIZATION OF SPACE OPERATIONS
    - DO NEW TECHNOLOGIES CHANGE THE DEBATE?

- DOES A SEGREGATED POLICY SUPPORT THE FUTURE?
SPACECRAFT?

THREAT, HAZARD OR USER

How the operation is considered affects the policy approach

- Airspace Access
- Safety regulation in shared airspace
- Legal issues
  - Liability
  - Registration
  - Over flight privileges and charging
BETWEEN AVIATION AND SPACE

20 km to 100 km “PROTOZONE AREA”

- New categories of users
  - Space like operations and services
  - Aviation characteristics of flight
CONCLUSION

• **Current segregation between aviation and space policy may not be suitable for future development**

• **An integrated policy approach may be necessary to support the emerging commercial sectors**
