Research is a partner in forward focused time

By Mary Kathleen Gorman, MDS and Rita I. Herron, Ph.D

The complexities of modern society and the dynamic forces of progress necessitate that professionals in every discipline be forward-focused, which is believed to come from gaining higher education. This is becoming standard within the fire and emergency services professions and is commonly a factor regarding upward mobility. With that in mind, the U.S. Fire Administration/National Fire Academy (NFA) developed the Fire and Emergency Services Higher Education (FESHE) recognition certificate. FESHE recognition acknowledges that colleges and universities are committed to the academic excellence of professional development education criteria set forth by the FESHE committees and the NFA (USFA, 2013). The underlying academic belief is that additional education will be a catalyst for academic research. This research will have a two-fold impact on public safety: academic/research. This research will have a two-fold impact on public safety: academic/research.

The NFA released a report on March 1st of this year which compiled institutions of higher learning having achieved the FESHE recognition and regional accreditation. The FESHE certificate represents that the program being offered meets the “minimum standards of excellence” set by the National Fire Academy for academic degrees. The report also lists colleges or universities which are regionally accredited Accreditation which reflects that the program is recognized by the Council of Higher Education Accreditation (CHEA) and the U.S. Department of Education. The ACCS recognition and accreditation status should be important considerations for prospective students when evaluating educational alternatives. In addition, online learning offers another modality conducive to shifting schedules and geographical remoteness. According to the USFA (2012) report, there are 92 regionally accredited colleges and universities in 39 states (two offering online degrees), with 15 others having achieved the FESHE recognition for associate’s degree programs. For the Bachelor’s degree programs, 24 colleges and universities are regionally accredited in 25 different states (four offering online degrees), with another 16 institutions having the FESHE recognition.

What the USFA report indicates is that the academic community is increasingly responsive to the needs and challenges of today’s public safety professionals. There is no substitute for training, and the experience gained through history is invaluable. This is an interesting time of change for the fire and emergency management area. We are moving toward a forward-focus rooted in academic research combined with innovation which leverages science and technology. It certainly is a recipe for superior stewardship of the profession in this millennium.

Professor Gorman is an Associate Fire Science Program Chair at Embry-Riddle Aeronautical University (ERAU). Before coming to ERAU, she spent 27 years as a geologist in the environmental sector responsible for regulatory development, emergency pollution response, incident investigation and remediation, disaster planning, and hazardous materials/solid waste management.

Dr. Herron is an Associate Fire Science Program Chair at Embry-Riddle Aeronautical University (ERAU). Her Ph.D. is from Florida State University, where she worked prior to coming to ERAU. She has been at ERAU for seven years, in which time she served as the Interim Dean of Online Instruction and has maintained an active status on various University committees regarding online learning and academic technology advancement.
