Using an Augmented Reality App for Flight Training:

A specific part task training development effort for ATC communications and checklist flow

Parker Northrup, Stacey L. McIntire, Heather Marriott, Hong Zhan
Embry-Riddle Aeronautical University

Our Unique Approach

- Collaborative Multidisciplinary Project
- Began in the Fall of 2019
- Initial focus: Non-native English-speaking flight students

Contextual Analysis: Needs of International Student Training

- ERAU provides global aeronautical flight education and training
- International students are required to meet English minimum standards by FAA/ICAO governance
- "Jargon" of flight is a unique subset of English proficiency
- Highest intensity occurs in the first 15 minutes of flight and during practice for takeoff and landing operations
- Established methodology was basic rote memorization or repetition with flight instructors in "live" operations.

Augmented Reality Potentials

- Augmented Reality leverages a sense of live operations at a reduced cost
- Eliminates variability in English tone, pronunciation, and enunciation among native speakers
- Segmented scenarios allow specificity to situational radio usage for students (i.e., Eliminates learning "aviation vocab" outside of contextual clues)

Purpose: Project and Research Questions

- The **purpose** of this research project is to evaluate the efficacy of adding ARAir, a mobile App designed by Embry-Riddle Aeronautical University (ERAU) engineer faculty and the ERAU flight department for international pilot students.
- Specifically, does AR help international pilot students interpret English directions from an Airport Tower correctly and give appropriate English responses to “move” a computer-generated airplane to the correct location in the correct manner?

Subjective and Objective Measures:

- How do international students use ARAir?
- What are international students’ perspectives on the design of ARAir?
- What are international students’ perspectives on the effectiveness of ARAir in learning radio communication?
- Are there performance changes pre/post use of ARAir?

ATC Scenarios

ATC Comms

Airport:

- Prescott
- Cottonwood
- Wickenburg
- Deer Valley

Easy: 9/21 ★

Medium: 0/27 ★

Hard: 0/3 ★

The screenshot shows a menu for selecting ATC scenarios. At the top left is a red curved arrow icon. The title 'ATC Comms' is centered. Below it, 'Airport:' is followed by a list of four airports: Prescott, Cottonwood, Wickenburg, and Deer Valley. To the left of the list is a headset icon. Below the list are three difficulty level buttons: 'Easy' with a headset icon, 'Medium' with a speech bubble icon, and 'Hard' with a padlock icon. Below each button is a score and a star icon: 'Easy' has '9/21' and a yellow star, 'Medium' has '0/27' and a yellow star, and 'Hard' has '0/3' and a yellow star.

Prescott Regional Easy

1 2 3 4

5 6 7

Random Practice Mode ATC Text OFF

The screenshot shows a selection screen for 'Prescott Regional Easy' scenarios. At the top left is a red curved arrow icon. The title 'Prescott Regional Easy' is at the top. Below it are seven numbered boxes (1-7) arranged in two rows. Each box has a star rating above it: boxes 1, 2, and 3 have three yellow stars; boxes 4, 5, 6, and 7 have three grey stars. At the bottom, there is a 'Random' button with a black square next to it, and two buttons on the right: 'Practice Mode' and 'ATC Text OFF'.

You are parked on the Riddle Ramp. Dispatch assigned you to aircraft 76. You have copied the ATIS S. For a westbound departure, what is the radio call to ground?
