NASA's McCoy speaks on shuttle program

Mike R. Burger
Staff Writer

"The SPACE SHUTTLE AND THE NEXT THIRTY YEARS IN SPACE" was the topic, and the speaker was NASA's Chief of Future Programs, Mr. Gene McCoy; his lecture got underway just short of 8:30 p.m. and lasted for about an hour and a half.

For the students, it was an informative evening they will remember. McCoy's honest speaking, and interesting innovative ideas caught the spotlight last Wednesday. McCoy briefly introduced himself, and presented his slide-show to more than 150 students on the Daytona Campus. University Center, McCoy handed out a specially made ceramic-coated tile, similar to those which are currently being mounted on the surfaces of the spacecraft to make it possible for the shuttle to withstand repeated heating and cooling up to 100 round-trip flights without replacement. McCoy explained that the tiles were manufactured at the Lockheed plant in Sunnyvale, California. Starting out as silicon fibers, says McCoy, the dry, cotton-like material was mixed with water, and can be into large blocks from which several of the actual tiles were made.

In a typical shuttle mission, which could last from 7 to 30 days, the orbiter's main engines and the booster ignites simultaneously to rocket the

President of FAPA provides job hunting tips

By Dan Karger
Staff Writer

Lewis Smith, President of FAPA (Future Aviation Professionals of America) spoke about the aviation business last Thursday night to a capacity crowd in the University Center. He explained how FAPA is an information service providing future airline pilots with facts and guidance to make important career decisions. Mr. Smith gave three reasons why an aspiring pilot would need FAPA services:

The first was competition, second, the cost and risk involved in pursuing an aviation career. And thirdly, the fast changing industry requires constant updates for the job seeker.

Mr. Smith admits the future is a little cloudy, but his company projects 17,000-19,000 jobs opening up with the airlines in the 1980's. They project 10,000 jobs opening up with the commuter airlines, 7,000-11,000 jobs in corporate aircraft, and 7,000 jobs in helicopters.

Mr. Smith said the airlines are looking for anywhere from \$60 to 4,000 hours, depending on the airline, and an ATP. He said commuter airlines are looking for about 500 hours, multi-time, possibly an ATP, and "a pilot who likes twinkles and Pepto for lunch."

He said the military was considering a \$6,000 bonus for military pilots because their pilots kept flying. (See FAPA Page 7)

Satellite successfully launched

By Gary Tarizzo
Staff Writer

The first of three SBS-A Advanced Commercial Communications Satellites was successfully launched from Cape Canaveral on Saturday Nov. 15 at 5:49 p.m.

The Satellite was launched aboard a Delta class rocket booster and will provide integrated, all-digital

interference-free transmission of telephone, computer, electronic mail and video teleconferencing to SBS business and industrial clients.

The owner and operator of this telecommunications satellite is SBS or Satellite Business Systems a private company equally owned by Astra Life & Casualty, COMSAT General Corporation and IBM.

The SBS satellite, built by Hughes Aircraft Corporation is the first U.S. domestic commercial satellite to transmit data on the less contested 12 to 14 gigahertz (K band) frequency and is capable of relaying up to 480 mega-bits of information or the equivalent of more than 10 million words a second.

This launch also marks the maiden flight of the first payload amateur mode (PAM). This particular launch uses the PAM rocket instead of a conventional third stage to launch the satellite into geosynchronous orbit, 22,300 miles above the earth. The PAM vehicle will also be used aboard the space shuttle to launch other satellites into geosynchronous orbit.

Satellite Business Systems will contract the use of the satellite through 10 earth stations. Large corporations that use this system of communication will save as much as 30-40% of their present telephone expense. SBS will be direct competition with the major telephone companies, and according to Mr. Robert C. Hall, President of SBS. "This kind of communication system will revolutionize the business communication around the U.S."

With 200 earth stations by 1983 and the second and third SBS-A satellites in orbit, SBS will provide communication for large and small corporations throughout the continental U.S.

By Cathy Babineau, Staff Writer

Robert C. Booth, Senior Vice President of Marketing for Air Florida, was the guest speaker at the Management Club's November dinner last Friday night.

Booth replaced Ed Acker, chairman of the Board for Air Florida who was originally scheduled to speak. Acker was in California negotiating the acquisition of Air California. After Air Florida expressed an interest in Air California, it became apparent that four other airlines also wanted to purchase it. Acker had to represent Air Florida at a meeting of all five interested parties last Friday afternoon in Los Angeles.

After dinner, Booth was introduced by Randy Alexander. The key to Air Florida's success, according to Booth, is "Our airline is founded and managed on providing the best product at the best price to the public."

Innovation and willingness to change are also key ingredients of the Air Florida Philosophy. Booth said that one of the most innovative concepts has been running Air Florida, "A business which happens to be an airline." Air Florida is a child of deregulation. Also we believe that there size isn't any indication of strength - profit.

Before entering any market we conduct extensive market research. We have absolutely no hangups about pulling out of a market if it proves to be unprofitable.

That every new route which has been initiated this year has been profitable from the first month, is evidence of the success of Air Florida's approach.

Air Florida is also cost conscious. Booth stated that the management of Air Florida believes in keeping overhead costs to a minimum while encouraging high morale and productivity. Each employee of Air Florida "owns a piece of the action" through a company profit-sharing plan. The idea is that if employees have a personal stake in the company, they are more motivated to help it earn a higher profit. An example of this is the reservations

dollar was more wisely spent? "We think in economic competitive advantage will keep us in the ball game," says McCoy.

TRYING TO KEEP UP WITH THE SCHEDULE

With the launch date for the first Space Shuttle flight now set for next Spring, NASA workers are trying to keep up with a schedule of events leading up to an early March blast-off. Modifications on the orbiter, the airframe-like craft George McCoy jokingly describes as half-airplane, half-brick, ended Nov. 1. The NASA calendar called for heat tiles to be in place by last Sunday, Nov. 16, and the orbiter Columbia to move to an assembly building at the Kennedy Space Center by Nov. 23.

The following day the entire Shuttle assembly will be placed on the launch pad.

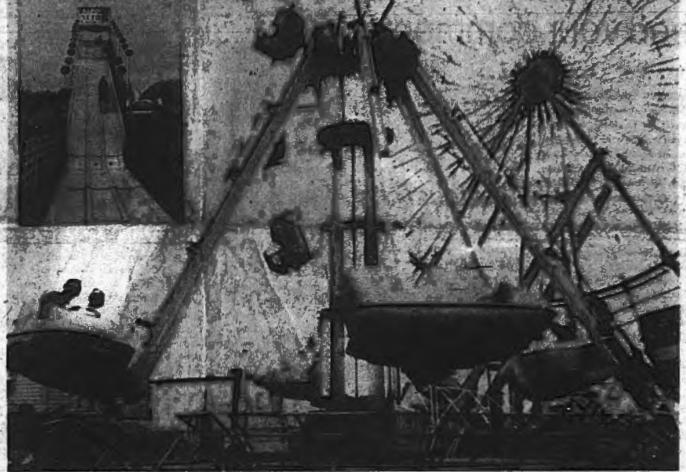

There will be a main propulsion engine test on Dec. 1. A flight readiness test firing will be made on Feb. 7, and the launch will be made about mid-March.

SHUTTLE'S ROOTS

It was here in the Rockwell International Assembly plant near the Mojave Desert that Columbia, NASA's reusable Shuttle orbiter was put together. Columbia travelled overland by truck to the Dryden Flight Research Center.

(See SHUTTLE Page 7)

AirFlorida Vice President speaks to Mgmt Club

By Cathy Babineau, Staff Writer

Robert C. Booth, Senior Vice President of Marketing for Air Florida, was the guest speaker at the Management Club's November dinner last Friday night.

Booth replaced Ed Acker, chairman of the Board for Air Florida who was originally scheduled to speak. Acker was in California negotiating the acquisition of Air California. After Air Florida expressed an interest in Air California, it became apparent that four other airlines also wanted to purchase it. Acker had to represent Air Florida at a meeting of all five interested parties last Friday afternoon in Los Angeles.

After dinner, Booth was introduced by Randy Alexander. The key to Air Florida's success, according to Booth, is "Our airline is founded and managed on providing the best product at the best price to the public."

Innovation and willingness to change are also key ingredients of the Air Florida Philosophy. Booth said that one of the most innovative concepts has been running Air Florida, "A business which happens to be an airline." Air Florida is a child of deregulation. Also we believe that there size isn't any indication of strength - profit.

Before entering any market we conduct extensive market research. We have absolutely no hangups about pulling out of a market if it proves to be unprofitable.

That every new route which has been initiated this year has been profitable from the first month, is evidence of the success of Air Florida's approach.

Air Florida is also cost conscious. Booth stated that the management of Air Florida believes in keeping overhead costs to a minimum while encouraging high morale and productivity. Each employee of Air Florida "owns a piece of the action" through a company profit-sharing plan. The idea is that if employees have a personal stake in the company, they are more motivated to help it earn a higher profit. An example of this is the reservations

handy approximately 150 calls per day and their goal is to sell a ticket to at least one half of them.

All employees, from their first day with the company, are made to feel that their job and their level of performance are important to the ultimate success of the company.

In the next year, Booth said, Air Florida plans to hire 800 additional people. One hundred pilots, 300 flight attendants and the remaining 400 people will join Air Florida. Only two years ago, Air Florida only HAD 800 employees.

This weekend it was announced that Air Florida bought Air California for \$47.5 million. Present plans are to operate each airline separately.

"We don't want to get too big. I've observed the bigger they (airlines) get, the worse they get."

When asked if he expects the current rate of growth to continue, Booth said, "We don't want to become too big. I've observed that the bigger they (airlines) get, the worse they get. We intend to expand and grow, but not in the current industry's definition." This expansion is already beginning. Air Florida is sponsoring some other commuter service in south Florida to some of the Caribbean islands. It is an "airline within an airline."

Before joining Air Florida, Booth had a wide and varied background in the airline and travel industries. He founded CBS Tours and was first president of the South American Travel Organization (SATO). He also worked for American Express as a travel correspondent in Uruguay and Panama. Prior to serving as a marketing consultant and general manager of the Northern Division of Aero Peru, he was Corporate Vice President of Sales for Braniff International Airlines.

EDITORIAL

Matt Matson

Students are pre-registering for the Spring 1981 trimester. All this week and if Monday is any indication, it seems as though it is going to be another flaco.

The lines in the U.C. on Monday were much too long for students to wait in. Many waited in line for over four hours simply to buy classes for next spring. Some students had to miss class in order to register.

Even though the registration process has improved greatly in the past three years, something must be done to prevent such lengthy lines.

Maybe if the students who are scheduled for certain times would come at the stipulated time instead of cluttering up the lines by coming early, the lines could be alleviated. Prior planning on the Administration's side could have prevented hundreds of people from regathering on the same day. Why does registration have to be accomplished in just three days?

On another note, the students

who are stealing the silverware and the trays are very inconsiderate to their fellow students. Not only is it inconvenient to wait for trays and utensils before one eats, but it also costs every student money for another piece of Epicure's property is littered.

I can't believe that some students are naive enough to believe that the food service will absolve them of the stolen articles.

One final message is that next week will be this trimester's last issue of THE AVION, so if anything must be published, Thursday at 4:00 p.m. is the deadline. Period.

By Ramone' Fubman

APATHETIC OF THE MONTH

This could be your picture in this space! We know this is asking a lot but if you can write in 25 words or less why you feel you should be voted Apathetic of the Month then you may be in the "Avion"! If you don't want to write then just sign your name or put an "X" on a 3 x 5 index card and send it to us for consideration.

Those of you who have read this far need not apply.

ADDITIONAL NEWS

The physical plant has still not recovered the three men assigned to studying the parking lot surface.

The men equipped with food and water supplies for three days and a vehicle resembling the moon rover ventured into the bombing run, converted parking lot Friday in the hopes of finding two Embry-Riddle staff cars and a night security guard who disappeared two weeks ago while chasing bike-thieves across the campus.

The authorities believe the security guard was near the library because his last radio transmission faded from that area.

Students speak out

By Justin Serben

I would like to comment on Epicure's insufficient means of clearing cafeteria tables. I feel that people should be given the job of cleaning tables. After waiting in line for a few minutes I would like to sit down.

However, much to my dismay, most every table place has no one sitting at it has trays and garbage on it. The people who are assigned to clearing tables can not keep up with the constant flow of hungry students.

So, if there are more people assigned to this duty more tables will be clear and the environment of the U.C. will seem cleaner. I hope action of some sort will be taken soon. Thank you.

[EDITOR'S NOTE: It is the responsibility of each and every student to at least make an attempt at returning his/her tray to the proper receptacle. If all students would cooperate, then the problem of messy tables would not exist.]

By Roger Craig

I feel that phones should be installed in the resident hall and dorm rooms. When someone is trying to locate a student by phone he takes the chance that no one will be there to answer the pay phone. If, by chance, someone does answer the phone, that person has to run around looking for the room, find it, and if it is late get the student out of bed.

Getting out of bed at 2 a.m. when it is 45 degrees outside does not appeal to many students. Having phones in the rooms would make phone calls cheaper for the student. Also phones in the rooms would eliminate having to run around looking for an available pay phone. A student with a phone in his room is a student who is healthier, safer, richer and more relaxed; therefore, a student who can study with a greater degree of competency.

[EDITOR'S NOTE: The Student Government is researching the possibility of installing phones in the Residence Halls.]

PRESIDENT'S CORNER

Where are we now?

Here we are in the throes of registration. It's a jungle outside the

S.G.A. office! I hope everyone is getting all the courses they want without too many problems. It's amazing how long the lines get!

I hope everyone went to see The Robbie Thompson Band Saturday night in the University Center. It was great! Everyone had an excellent time. I want to thank all the people in Entertainment - you folks did a super job!

Not much else to report on this week. All the projects I reported on last week are coming along pretty well. Hope everyone is getting ready for Thanksgiving break, and THEN finals!

VANDALISM COSTS

By Rod Harris, S.G.A. Rep.

Well, friends, it looks as though tuition is going up another hundred bucks next fall. One of the causes of this is VANDALISM.

Do yourselves a favor, fellow students, and learn this lesson now: E.R.U.P. pays for NOTHING! We students and taxpayers pay for EVERYTHING!

Every time you break something for giggles, it comes out of your pocket and mine, and frankly, I can't afford it.

The atmosphere around here is bad enough without the additional strain imposed by vandalism. There are several less expensive ways to entertain yourselves, so let's start looking for them, and if you find one, please share it with the rest of us.

SENIOR CLASS MEETING

A Senior Class Graduation meeting has been scheduled for November 20, 1980 (tomorrow night) at 7:30 p.m. in the University Center. A Senior Class President will be elected and graduation procedures and announcements will be discussed.

*ALL GRADUATING SENIORS ARE REQUESTED TO COME!

ATTENTION: If you are looking for a way to make some extra money with little or no time commitment, work part-time classes, no floor to door selling or Tupperware type parties: it's time you called us - find out today! Call Carlos 255-9185.

RESIDENT ADVISOR APPLICATIONS NOW AVAILABLE

Applications for Resident Advisor positions for Spring and Fall, 1981 are now available. All applicants for a R.A. position must live in the Residence Halls for at least one trimester and sign up to take the Resident Advisor Training Seminar to be held during the Spring trimester.

Application forms are available in the Housing Office, Residence Hall II, between 8 a.m. and 5 p.m. Application deadline is November 20, 1980.

The Resident Advisor Training Seminar will be held on Tuesday and Wednesday nights, 7 p.m. to 8:15 p.m. The seminars will be aimed at developing skills to assist candidates with problem solving, goal development, communications, and decision making.

WACKY BRAIN WRACKERS

By Michael Abidoun (Albey)

SOLUTIONS TO LAST WEEK'S QUIZ

1. Leo Tolstoy

2. Vatican City, with an area of 12 square miles.

THIS WEEK'S QUIZ

- Does the Mona Lisa have eyebrows?
- What is the smallest possible number of people in a family consisting of two mothers, two fathers, two sons, two daughters, one in mother-in-law, one father-in-law, one daughter-in-law, one grandmother, one grandfather, three grandchildren, four children, one brother and two sisters?

NOTE: Send your answers to Box 5146.

ATTENTION : All those students who will be taking a flight course in the spring are reminded to check in prior to the start of regular classes so you can be assigned an instructor.

AVION ADVISOR

Dr. Bingham Stewart

THE OPINIONS EXPRESSED IN this paper are not necessarily those of the University or all members of the Student Body. Letters appearing in the AVION do not necessarily reflect the opinions of this newspaper or its staff. All letters submitted will be printed provided they are not lewd, obscene, or libelous, at the discretion of the editor, and are accompanied by the signature of the writer. Names will be withheld from print if requested.

Published weekly throughout the academic year and bi-weekly throughout the summer and distributed by the AVION, Embry-Riddle Aeronautical University, Regional Airport, Daytona Beach, Florida 32014. Phone: 252-3561 Ext. 1082

AERO-PLAIN IDENTIFICATION

THE FIRST EXACT ANSWER presented to THE AVION of the identity of this aircraft will win a free one trimester subscription to THE AVION, sent anywhere they want. The winner's name and the answer to the puzzle along with a new mystery aircraft will be published in the next issue of THE AVION. The student publications staff, previous winners and their families are not eligible.

Last week's winner was FRANK MONTALVO with the answer, the Ilyushin IL-86.

National Space Club awards scholarship

The National Space Club will award a \$3,500 scholarship for the academic year 1981-1982. The scholarship is in memory of Dr. Robert H. Goddard, America's rocket pioneer. The award is given to stimulate the interest of talented students in the opportunity to advance scientific knowledge through space research and exploration. The 1981 Award Winner will be introduced to the nation's leaders in science, government and industry at the Goddard Memorial Dinner to be held March 27, 1981.

The terms of the scholarship are as follows:

1. The applicant must be a U.S.

citizen, in at least the junior year of an accredited university, and have the intention of pursuing undergraduate or graduate studies in science or engineering during the interval of the scholarship.

2. The selection for the Award is made by the NSC Committee on Scholarships on the basis of the following:

- a. Official transcript of college record;
- b. Letters of recommendation

from faculty?

c. Accomplishments demonstrating personal qualities of creativity and leadership;

d. Scholastic plans that would lead to future participation in some phase of the aerospace sciences and technology;

e. Personal need is considered but not controlling;

f. Applicants should apply by letter and provide the necessary data requested in a,b,d, and e, above

Karl E. Lehman, AMT instructor, passes away recently

According to Jackson Seltzer, Aircraft Maintenance Management graduate from Embry-Riddle in 1974, informed the Avion that Karl E. Lehman, E-RAU Maintenance Instructor until 1972 was the "Best Faculty member" he ever knew, and with Mr. Lehman's recent death, Jackson wanted the university to remember this effective instructor.

Jackson told Avion staff that Lehman was born in Germany at the turn of the century, and was drafted into the infantry during World War I. However, through screening, he received a flight school slot instead of going to the front line.

Karl became a fighter pilot with maintenance skills, but was grounded when the War ended.

Part of his war experience was being held by the Russians for

KARL E. LEHMAN

about one year. Seltzer seemed to think that he was a possible Prisoner of War.

In the early 20's Lehman came to the United States, but never received an American pilot's license, because he never flew alone.

His maintenance background took him to Long Island, N.Y. to work in the aircraft maintenance field and during this time period was married.

Karl started his fixed base operation, next to the now, Kennedy Airport. He was working at the field when Lindberg began his flight

across the sea.

As part of his historic career, he served on aviation committees with Amelia Earhart, world famous aviator pilot.

At one time he took over a military base and was number two in charge, but couldn't become the head official for the base because of his German heritage. After World War II, he left the base and moved to Miami where he began to work for Embry-Riddle.

When Riddle moved up from Miami Karl commuted from Daytona to Miami because of his wife.

While with Embry-Riddle, Mr. Lehman was presented many awards by the students and was most respected for his ability in many maintenance jobs; example, Aviation Welding.

His wife passed away in 1974 and after his retirement he continued to live in Miami until his death.

It is impressive to see what an impression Karl Lehman made on this E-RAU family and it is with deep regret that E-RAU says goodbye to Karl Lehman, "the best faculty member" at E-RAU.

Jackson taught here after graduation, running the Simulator Department for two years. From 1975-1977 he was the area coordinator and maintenance instructor in Germany. He has also been a DC-9 captain for Evergreen.]

Spring loan deadlines approaching rapidly

A few spring student loan deadlines are approaching very soon. Any spring loan applications that are to go to Florida Federal Savings and Loan, Dade Savings and Loan, or the state of South Carolina must be in our office by Friday, Nov. 21, 1980. This will give us time to ge

them in by the last day of November, which is the final deadline for these lenders.

Students that are applying for Veterans loans should submit spring loan applications as soon as possible. We will send them to V.A. in SF Petersburg on Dec. 5, 1980. It helps to apply early.

Financial Aid holds workshop to inform students Nov. 25

A financial Aid Workshop will be given Tuesday, Nov. 25th in Building W, Room 304 for all interested students. Two sessions have been scheduled so that you can arrange to attend one or the other.

The first session is scheduled from 4 - 5:30 p.m. and the second from 6:30 - 8 p.m. The same information will be given at both sessions so please feel free to attend either.

The purpose of this workshop

is to inform students of what types of financial aid are available for 1981-82, explain what forms need to be completed and how to fill out these forms, in particular, the Financial Aid Form. There will also be additional information available concerning new financial aid rules and regulations signed into law by President Carter on October 3, 1980. Many changes have been made, all of which may affect your financial aid for next year.

ENTERTAINMENT

Jethro Tull's 'A' gets an 'F'

'A'
Jethro Tull

By John Scribner

Oh, for the days of BENEFIT, THICK AS A BRICK, and AQUALUNG. Jethro Tull is back with another entry in the muted effort category.

Sounding remarkably like SONGS OF THE WOOD, Tull's latest release, titled with a logo that resembles the letter 'A', is a polished, smooth effort that lacks all the raw talent of Tull's earlier albums.

Musically, Ian Anderson, the band's flautist, lead vocalist, songwriter, and the man behind Jethro Tull, has backed himself with yet another band for this album.

The only exception to the personnel change is Martin Barre, the band's lead guitarist who has remained with the band longer than any other member.

Yet, even with new musicians, Jethro Tull's music is becoming stagier. The sound is becoming, to be sure, but polished sound cannot replace creativity.

The similarity of Ian Anderson's control (or perhaps, smothering) of the group's creativity.

Lyrical, Anderson has lost his talent of poignantly looking at the hypocrisies and idiosyncrasies of our human race. What ever happened to songs like "Qualifying" and "Locomotive Breath"? On 'A', Anderson dabbles weakly in the idea of extraterrestrial invaders and four wheel drive jeeps (?).

Anderson has lost his critical eye. Perhaps it is due to the inevitable mellowing that comes with age. Tull's lack of drive can only be attributed to its founders and prime force, Ian Anderson; and when a band's founder loses his drive, it has to reflect in the band's work. Such is the case with 'A'.

The band's style seemed to be a tight mixture of Southern rock, blues, and some contemporary California rock (Thompson used to play with Bruce Springsteen and admitted that one of his biggest influences was Bruce).

When asked about his main style being Southern rock, "the band operates out of Virginia," Thompson said. "We're a mix of the '70s FREEBIRD band. Sure, they [Southern rock groups] have their place in rock, but that isn't what I'm after. I let them do it for themselves another Springsteen or Petty, he said. "No, I consider myself another, Robbin Thompson."

Robbin Thompson: powerhouse band

By Jeff Baffino

In one of the finer concerts of the fall, drummer, the Robbin Thompson Band treated the University Center audience to a unique combination of many rock styles. Their one hour and forty-five minute show was a well thought out sequence of rock, ballads and even blues, rage and quiet moments.

The band employed the typical five-piece rock lineup: lead vocal, guitar, bass, keyboards, and percussion. Robbin Thompson was the lead singer and also rhythm guitar and harmonica player.

The band's style seemed to be a tight mixture of Southern rock, blues, and some contemporary California rock (Thompson used to play with Bruce Springsteen and admitted that one of his biggest influences was Bruce).

When asked about his main style being Southern rock, "the band operates out of Virginia," Thompson said. "We're a mix of the '70s FREEBIRD band. Sure, they [Southern rock groups] have their place in rock, but that isn't what I'm after. I let them do it for themselves another Springsteen or Petty, he said. "No, I consider myself another, Robbin Thompson."

(Photo: F. Falzon)

The Robbin Thompson Band

Their set consisted of original material from earlier Thompson solo material and from music the band has made in their two-year career as a band. The Robbin Thompson Band has released one album entitled TWO B'S PLEASE and is scheduled to return to the studios in January for their second.

Several of the harder rock songs

of the concert contained some competent jamming, and the band was at ease with the packed U.C. crowd. The band's future is bright, according to Robbin Thompson, who admitted to enjoying college audiences as much as any they've played. The trade of the day was the "Wreck of Goliath." Here, the best qualities of the group were obvious: Robbin

See THOMPSON Page 7

Bar-Tender cruises Main Street

By Pat Hasset
Staff Writer

Bob Seger made a song about it; just about every town in America has one. Mr. Webster says, "Most important, principal, major;" synonyms and antonyms of it include superior and primacy. What is it? "MAIN" Street.

Main street is located five blocks from Broadway and a little under a mile away from Seabreeze Ave. It's east - west borders are the ocean and the river. Main Street was at one time the hub of civilization in Daytona Beach. This asphalt tract is now the next for bikers both locally and nationally.

Come and cruise with me down Main and visit it's drinking facilities otherwise known as bars.

First down the line is the Red Gate Club located on the corner of Main and A1A. This is known as one of the local topless bars in the area. I've already rated it. (Refer to last week's issue for details.)

Nest corner the Elbow Room Bar slightly off Main. This writer is not enthusiastic about this bar.

Toward the other end of the block and again, off Main is the Iron Horse Saloon. This place is known as a biker bar. This brought probably makes you, your wife and/or girlfriend shudder but have no worry. It's not as bad as what you may have heard. Once you get a chance and go to talking shop with the people in here it's not as hostile as you think it is. Drinky is cheap and strong. Out of a ten 7.8.

Just kaddie-corner to the Iron Horse is Riddle's Saloon, formerly the Nookie Pub. That makes you wonder if it's another of Jack Hunt's subsidiaries but again you have nothing to fear, for it's not.

Again a bad place - drinks aren't bad, service is fairly quick, no entertainment - only a juke box. I'd say a 7.5 out of ten.

The next stop is the Tropical Bar located across from the "Dallas Cowboy". If you get into watching palmetto bugs racing each other, down the bar to drink so they can jump in and back stroke, a bit, please be sure to make this a place

tops on your list. Entertainment is supplied by the "Boozing Bums," the best comedy side of the Halibut. I really got a laugh watching the bar residents fight over half a beer, watching their heads hit the bar for a siesta, and then stagger out due to lack of funds. Your best bet, would be to just drive on by. I won't bother taxing my brain to give it a rating.

Walk across the street to the "Dallas Cowboy" and have a hoot old time here. Formerly the "Wreck" Bar, the Dallas Cowboy is the newest C & W bar in the area complete with the mechanical bull, which I fell off six times. □

Drinks are good and strong, service is good, and if a DJ, isn't spinning your favorite Wille Nelson tune? the bards will do some pleasure to your ears.

Out of a "ten" gallon hat:

Don't bother going to Blackbeard's Tavern, not that it's bad or anything of that nature. It's closed and looking for a new owner.

Last, but not least, is the famous Boat Hill Saloon. The "Mecca for

Bikin" is a pretty nice place but you have to get into the type of people who habitually sit bar. Again they are pretty down to earth people.

The Boot offers a wide selection of beers from America and abroad. They recently expanded the saloon to accommodate more billiard tables. Other than the race track, the Boat Hill Saloon is the headquarters for bikers during bike week in February and boy, is it quite a sight to see what some people ride. I give the Boot a size 8 out of ten.

One last comment is that I won't be able to continue on with this column after December 13th, at 10 a.m., for fear that I might graduate. (This is all dependent on whether or not I pass my favorite class - Accounting with Mr. Chamberlin.) Anyway, I'm looking for a replacement to write my columns. I prefer that either you are or were a bartender, that you can write, and that you have one night a week to "your around."

If you think that you are of the right caliber for this column then please stop by the Axton Office or drop me a line at Box 2287.

This week drink:

PLANTER'S PUNCH

- 1½ oz. dark rum
- 2½ juice of ¼ lime or 2 oz. of Rose's Lime juice
- 3) quick dash of grenadine
- 4) dash Curacao
- 5) ½ oz. soda
- 6) garnish with a pineapple stick and a cherry
- 7) mix rum, lime juice, grenadine and Curacao; strain into glass; fill with soda; garnish it.

GIN PUNCH

- 2 cups lemon juice
- 1½ qts. orange juice
- 3) shot of grenadine
- 2 oz. gin
- 2 qts. soda
- 6) orange, lemon, and cherry slices for garnish.
- 7) mix ingredients into punch bowl with a block of ice and soda, stir slowly, garnish.

B) Makes about 45 servings

Note: If you don't like gin, vodka or rum can be substituted.

Euphoric voices travel over radio

New Covenant Players perform Christian coffee house

By Seth Tazik
Staff Writer

Have you ever wondered about the sometimes euphoric sounding voice on the radio known as the disc jockey? If you haven't wondered, the Avion did and subsequently decided to send this reporter to do a little investigative reporting.

Choosing for the interview was WDOQ of Daytona Beach commonly referred to as Q-102.

Lying amid used car lots, mismatched shops and picturesque piles of garbage is Root Street, home of Daytona's Q-102.

Lou Blackley, production manager was found sitting askew among heaps of papers and record albums. Lou apologizes, explaining that he is in the process of switching offices.

Lou and I talked for a while over cups of coffee, during which I stated my purpose and goals of the interview. Lou enthusiastically

agreed to the idea.

Picking up my trusty recorder I followed Lou to the other side of the building where the broadcast room is located. Opening the door quietly, Lou motioned me in. A man bending over a electronic console dotted with multi-colored lights and switches turned around. Lou introduced him as Brother Bob left the room...

Brother Bob who looks to be in his late 20s with moderate length brown hair was definitely not the stereo-type image I had always portrayed of DJ's. Instead he could be one of a thousand people I see on the street everyday. I now began the questions:

AVION: Why does a person want to become a DJ?

BROTHER BOB: Well, I had a cousin who was in the business and I went down to the radio station once to see it and said yes, this doesn't look hard, it looks like fun.

Indirectly it was all ago. When you first get into the business you don't worry about salaries and nothing like that. Then once you're in, you realize that salaries and moves and certain other strategic

International Students Office offers host family program

By Mustafa Eletriki
Staff Writer

E-RAU's International students can establish cultural ties with American families through the International Student Affairs Host Family Program.

While the host family idea is not new, around campus in the nation this is the first trimester E-RAU has offered the program.

The host family program was originally created to offer foreign students a cultural bridge by offering them a closer relationship with American families.

While the help offered is not necessarily financial, a foreign student can rely on his host family for knowledge and some assistance in living in the United States. Though most host families do not provide living quarters for foreign students, they often do invite students for meals and informal get-togethers.

According to Mrs. Charlotte Skinner, Director of International Student Affairs approximately 15-20 families in Daytona have agreed to act as host families for E-RAU's

international students.

Mrs. Skinner added that international students are usually contacted through articles in the E-RAU publication "Beyond The Horizon".

"International students should be aware that Host Families are available for the Thanksgiving break," Skinner said.

The international student affairs office will also be sponsoring a Thanksgiving dinner with those community families who were interested in working as host families.

For further information students may also contact Carmen Hamid or Karen Doyle in the International Students Affairs Office.

Charlotte Skinner, Director of International Student Affairs.

things you do with your career are important.

Everybody's goal is to work in the big city, because of so many more people that will listen to you; therefore, a bigger salary and finally the ultimate ego.

AVION: What kind of audience do you attract here at this radio station?

BROTHER BOB: What we do here, basically is mass appeal. If you take the entire listening audience from age 0 to age 100 put them in a circle, a person, for instance, we're aiming for the biggest piece of the pie.

The standard complaint you get on any station is that you play too many commercials. We here strive to keep our commercials at a limit where they don't interfere that much with our music. We aim here to let the music carry the radio station, it's our most important product and our biggest entity.

People have a habit of listening to radio with half an ear. They're doing something else, the house wife is cleaning her house, the guy in the car is keeping his eye on the road. Very few people turn on a radio, listen to it like you would watch television. We research our audience carefully, we're always on top of what they want to hear.

AVION: How do you research your audience?

BROTHER BOB: By telephone surveys, by our request line by which we keep a list of the most requested songs. We survey record stores and see what records are selling. We monitor the other radio stations to see what music they're playing. Then by combining all these sources we usually have a pretty good idea of what our listeners want.

The days of a DJ walking around wearing beads and saying hare krishna are really past. Often that's the way people think of us. They think that you come in here and spin records, have fun, and then go home. What they don't realize

(See RADIO Page 8)

you will be interested in a group called "The New Covenant Players". They will be performing at the Christian Coffeehouse on Monday, Nov. 24 at 7:30 or 8 p.m.: The Christian Coffeehouse is on North Ridgewood Ave., about 1.5 to 2 miles beyond Holly Hill police station on the right-hand side. It is right next to the Hotel Riviera.

If you would like better directions or more information about the club drop a note in my box (4597). There is no admission charge for the Christians' Coffee house but a donation to pay for expenses would be greatly appreciated. May God richly bless you this week.

Winged Sigs pledges cook out

By Chris Holloway

Chapter Editor
Well, after a brief hiatus of two weeks Sig Newton is back to record the history making events of the Winged Sigs. It was an action packed week, lot to talk about, so let's get started!

Congratulations are in store for Skip and Fibber. Skip was able to get out the revised by-laws for the first time in two years. Elbert, the chapter historian, built a scrapbook which is a model one at that. Measuring about two feet by one and one half feet it is, may the least, impressive. Excellent job on both parts, and so they will share the brother of the week award. Good job guys.

On Saturday the pledges had a cookout at the house. Chili, hot dogs, beer were on the menu, with the pledges giving the brothers a good time. Glenda Catania cooked up a wicked bowl of chili with all G.C. coordinating things down by the grill. You guys did good. We're im-

pressed.

Later that night the Sigs road tripped it to Bunnell and the Flying W Ranch for a hayride. A key was on hand for the occasion; and the brother's spirits were high. During the entire two hour trip songs were sung with an occasional hay fight. Thanks to John Clough and

Jim Dillon who organized the event, and the Flying W Ranch who gave us a good time.

Space does not permit me to write further so I will terminate it here, glad to be of service, and thank you for reading this far. Until next week. Aloha.

Lambda Chi Alpha; brotherhood runs high

By Big Al

Howdy! Many of you may think that it's a lot of fun writing this article every week. Well, believe it or not, it isn't, especially when there's nothing to write about.

Truthfully, however, have that problem. You see, for a small group like Lambda Chi Alpha, we manage to do a great deal of things together; whether it's going out to dinner and beer, or going to Key West.

The "Brotherhood runs high,

Saturday we associated two fine men: Russ Palomar and Rhanny Nipper. It's good to have you with us, guys. Sorry I missed the ceremony, but I just messed up.

Friday night saw Ted and Russ and this writer off on a trip in search of the perfect triangle. I think we found something; but it will require more research to smooth out the rough edges.

Now that the vehicle is obtained, it's getting time to follow our favorite bunnies, Khamra, to Kay West, the tale of Sunshine, and refugees.

That's Thanksgiving, folks. And remember: for a trip like this we really got to have faith!

Management Club dinner resounding success

By Cathy Babbs

The Management Club dinner held last Friday night at the Treasure Island Inn in South Daytona was a resounding success.

Robert Booth, of Air Florida was an excellent speaker and assured the club that Ed Acker, Chairman of the Board for Air Florida is eager to be one of our guest speakers this Spring.

Booth, in a conversation after dinner with club president, Randy Alexander, expressed an interest in developing a co-op program for Embry-Riddle students.

Just after dinner, Randy announced that the club's treasurer, Gwen Holkeboer, will be "retiring" in December due to graduation. Nominations were then open for a new treasurer and Andrea Tate was nominated. The nominations will remain open until the end of the week. Please place your nominations in Gwen Holkeboer's box 2793.

JIMMY VAN ZINO (center) shows the winning ticket and smile. (Photo: G. Lammerich)

By Zoomer, Chapter Soc.

The meeting is scheduled for Friday afternoon, and afterward, everyone will be going over to President Hunt's.

Congratulations to Larry Smith, the Vice President for getting his Flight Instructor certificate.

The air lift and the "pig in the face" fundraiser are great ideas, thanks a lot for both, Larry.

Final interviews will be tomorrow.

Air Force ROTC inspects MacDill AF Base

Last Sunday, the cadets and cadre of the 157th Air Force Reserve Officers Training Corps (AFROTC) Detachment traveled to MacDill AFB, in Tampa, Florida.

MacDill's annual airshow was once again, a sensational display of aircraft, equipment and precision aerobatics. Along with the many static displays of Air Force and Army aircraft this year, were featured MacDill's own F-16 Falcon, the U.S. Air Force Thunderbirds, and the Army's Golden Knights.

Many of our freshmen cadets

Arnold Air Society raises

money for cerebral palsy

By John Glass "Your Info Officer"

Last Sunday, 9 Nov., several of us had the opportunity to aid the Cerebral Palsy Foundation by helping at Daytona Beach Aviation to give plane rides to the public. For three cents a pound, people could ride aboard a Cesna 172 and for \$20 they could ride in a T-6.

Brian Duddy and I took the opportunity to go up in a T-6, each of us in a different plane. The pilots were kind enough to take off in formation and fly that way along the beach.

We were cruising along cheerfully when suddenly we spotted the enemy - a 12-foot saltwater crocodile along through the water.

At the command, the pilots simulated a dive attack on the poor defenseless sailor. After the raid we pulled up into a roll.

After the sorte we returned to

were exposed to these military aircraft for their first time.

They were immediately impressed with the variety from the massive and whale-like C-5A, to the sleek and dart-like F-16 Falcon.

I must applaud wing staff's decision for sponsoring this trip. In no other way could these cadets be allowed to examine up close such a varied line of equipment and military functions.

Indeed, it is very possible, that many of our newer cadets are now developing opinions and attitudes

Arnold Air Society raises

the base. Now Brian and I both know just what it was like on that fateful day of December 7, 1941.

Four names were left out of last week's list of winners for the costume contest. They are Steven Myers, Lala Lipomanis and Norm Lagasse and Lisa Poole, who tied with the others for best couple. After this there will be no more corrections.

At least we know our girls will be smooth and sleek for their initiation on December 12. For those who are getting initiated early you need to decide on your calendar.

Also, I would like to remind you about the pledge test on Nov. 23. The environmental project this semester is cleaning up the beach at Ponte Inlet on Saturday, Nov. 22, so mark it on your calendar.

People who owe money for being caught without their pledge pin, please give it to Nancy Topping Rm. 127, Dom. II. Have a good week.

PATCO

(Cont. From Page 1)

its installation in 1974.

Eads feels that the computers should be replaced as soon as possible but added that it could take up to six years due to expense and "bureaucratic red tape."

Currently, the FAA plans to replace the IBM-32D computers being used in 1990.

Eads summarized PATCO's concern with the obsolete computer saying, "That computer is not writing checks; it's separating airplanes and people's lives are at stake."

New Contract Talks

PATCO officials also want to renegotiate a new contract with the FAA. Their present three year contract will expire in March of 1981 and according to Eads, definite changes will be sought.

It is now illegal for PATCO employees to strike. Eads

said that were contract negotiations to break down, a strike would not be out of the question.

Job security is one of the major issues at stake in the talks. According to Eads, controllers with spotless records can be summarily fired without "a bat of an eye."

Eddie Bernard

Shuttle

(Cont. From Page 1)

And when it returns there again it will be returning directly from space. The Shuttle's first launch will be in the neighborhood of 54½ hours from lift-off to touch down. The shuttle's first revolution will have a couple of maneuvers in it to get it into good orbit and 150 miles circular orbit. It was at the Dryden Flight Research Center, that the Space Shuttle orbiter was mounted on top a 747 jet.

Equipped with a delta wing, Space Shuttle orbiter is about the size of a DC-9 jet aircraft and is capable of carrying four Delta type payloads, or 65,000 pounds. The orbiter is designed to carry a crew of up to seven, including scientific and technical personnel.

Since the maximum gravity forces experienced at launch and recovery will not exceed .3G's, any person in good health may travel to and from space in the Shuttle. Researchers will require only several weeks of familiarization training prior to missions, says McCoy.

This seemingly futuristic technology introduced movies, like Star Wars just a few years ago, is no longer science fiction. McCoy points out, in 1990 the Space Shuttle program will still be in its infancy, but the decade of the 80's will have laid down a foundation for a science fictional future, beyond 1990, even the sky is not limit.

According to Secretary of Defense Harold Brown, by the mid-1980's DOD will be totally dependent on Shuttle for supporting space missions, says McCoy.

KEY TO PEACEFUL SPACE EXPLOITATIONS

Just as Space Shuttle may become a crucial link in our national security, it will also be the key to our plans for peaceful exploitation of space.

During the question and answer session, he answered all questions candidly. One student asked what was the total cost of the Shuttle program? While McCoy didn't give exact figures, he explained that in 1973, the Shuttle program cost \$16 billion, for 1981 dollars includes the 1971 figure in addition to today's inflation and cost overruns. And a further federal mandate to cut the Administration's budget by 20%. The Shuttle Program is based on achievable technology, and economic feasibility. Without positive support and future interest this proposal is tantamount to its abandonment.

HOW CAN STUDENTS GET INVOLVED IN PROGRAM

Another question posed to McCoy was how flight students could get involved with Shuttle? The astronaut (space pilot) of today has a college education beyond a bachelor's degree... often a doctorate in engineering or science... and is in excellent physical condition. In August 1979, NASA announced that it would begin recruiting astronaut/pilot candidates annually. While McCoy didn't state the actual training requirements necessary for shuttle involvement, he did state and emphasize getting qualifications in Management Organization, while downplaying a flying background.

McCoy suggested optimizing your career "Having scanned 10-14 years of tissue" in such companies as: Boeing, Martin Marietta, TRW, etc., for a solid technological background, preferably a Master's degree with Management experience.

There are some marvelous benefits ahead for mankind. McCoy explains that "NASA is like forward-looking father people. We plant seeds for a living. Seeds that take up to 50 years to become mature trees. Therefore, we think a lot about the future of the forest." You might say: Gene McCoy's planting seeds of thought for tomorrow. And in 1984, a respected science magazine said, "Landing and moving around the moon offers so many serious problems for human beings that it may take science another two hundred years to lick them."

Obviously, no matter what you may hear to the contrary, says McCoy, the future is coming. And soon. And with it will come incredible changes in our lives. This ever-compacting Shuttle future, with its vast and incredible technological innovation is still several years distant. But time is a critical factor, according to McCoy, while the government talks about the future, the Soviets are apparently turning the fantasies of Hollywood into the realities of today.

**Eddie Hinton brings Redding Soul to E-RAU**

Local Scene

By Terri Little

To get an idea of how local controllers feel about the issues THE AVION spoke to Andy Bernard President of PATCO's Daytona Office.

Bernard told us that while the computer problem does not really affect the Daytona Beach airport controllers, the demands for the new contract are essentially the same as those stipulated by Eads.

"Daytona uses the 'Automated Terminal Radar System II (ARTS)',

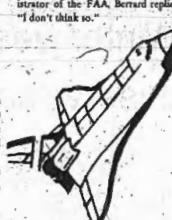

which is not the IBM-920 and we are satisfied with the ARTS II," said Bernard.

Bernard attributes many of PATCO's troubles to FAA Administrator Langhorne Bond who has eliminated various programs and benefits for controllers since coming into the office of Administrator.

"Bond has been quoted as saying, 'A controller's job is harder than driving a bus,'" Bernard said.

Bernard stated that in the upcoming contract negotiations, PATCO will be looking for shorter working hours, more staff, and better retirement benefits.

Asked whether he thought PATCO would win these benefits, while Langhorne Bond was Administrator of the FAA, Bernard replied "I don't think so."

By Carlos Roque
Staff Writer

The University Service Park, E-RAU's next planned expansion, is already completed while the site of the Service Park has been trimmed from four buildings to three. The only other change involves moving the entire service park south along Clyde Morris some 480 feet from its original location adjacent to the Main entrance.

Stottler, Staff and Associates, Cape Canaveral, Fla., the engineers on the project, have advised the University that their work on the engineering drawings is proceeding ahead of the anticipated schedule. Mr. T. Bruce Croft, E-RAU's new Director of Plant and Facility Development, told this reporter he anticipates the drawings will be available December 1. By January 1, E-RAU will be able to advertise for construction bids and expects to award a contract

with the Muscle Shoals Rhythm Section, 1967-1971, Eddie Hinton had the opportunity to back up such soul and blues greats as Wilson Pickett, Aretha Franklin, Greg Allman and the most recent, the Nighthawks.

Soul is his love, but blues is not far behind. The songs he plays in concert are a combination of the two with his own flavor added.

It was early in 1978 that Hinton, along with members of Muscle Shoals recorded his first album "EXTREMELY DANGEROUS." His opened new door to the modern soul world.

The first cut, "SHOUT BAMA-LAMA," is a tribute to Redding (the first hit for the late represe-

nter), the songs that make up the rest of the LP, are all original written and produced by the talented Hinton.

His style is every changing "YOU'VE GOT ME SINGING" is a celebration of love, "SHOOT THE MOON" blues, a joyous "BRAND NEW MAN" and even a gospel flavored "YEAH MAN," which adds life to his recordings and concerts.

Hinton is bringing back the Funky Soul music that has been missing from the music world for far too long.

Thompson

(Cont. From Page 4)

Thompson's gritty vocal, tight arrangement, and polished but loose jamming.

The Robbie Thompson Band is moving on, establishing their style and working on the road. But he has no aversion to returning to

Riddle.

Possibly those who missed the concert this year will get a second chance in the future, but a concert at the Lakeland Civic Center instead of the University Center.

Service park nearly completed

By Carlos Roque

Staff Writer

The University Service Park, E-RAU's next planned expansion, is already completed while the site of the Service Park has been trimmed from four buildings to three. The only other change involves moving the entire service park south along Clyde Morris some 480 feet from its original location adjacent to the Main entrance.

Stottler, Staff and Associates, Cape Canaveral, Fla., the engineers on the project, have advised the University that their work on the engineering drawings is proceeding ahead of the anticipated schedule. Mr. T. Bruce Croft, E-RAU's new Director of Plant and Facility Development, told this reporter he anticipates the drawings will be available December 1. By January 1, E-RAU will be able to advertise for construction bids and expects to award a contract

by January 15.

The purpose of the service park is to house on the main campus those operations now being conducted on the other side of the airport. Building "A" will be a service station to fuel, service, and repair the University's fleet of vehicles. Building "B" will contain plant operations - electrical, maintenance, grounds maintenance, stocks and supplies for plant operations, and the office of the Directors of Plant and Facility Development. Building "C" is for the print shop, receiving and supply for administration, and word processing.

The number of buildings was cut to 3 for budgetary purposes, while the service park's location was shifted to allow room for future development.

By moving plant operations to the east side of campus, it is felt they will be better able to serve both the students and the university.

Service park bids go out in December

SITE OF E-RAU'S proposed service center site on the corner of Clyde Morris and Volusia Ave.

In keeping with its planned expansion program, Embry-Riddle Aeronautical University will ask for bid proposals in December for construction of a Service Center.

The Park, to be located to the left of the main entrance to Campus off Clyde Morris Boulevard, will consist of three separate buildings.

Coolie speaks sports

Florida State bowl bound

To start this week's article, I think it's only fitting to mention a few college bowl appointments. Both of Florida's major college teams made it to a bowl game this year - Florida State, after losing in the Orange Bowl last year will get the chance to avenge the loss with a return visit this year. I think it is safe to say that it should be a successful year for the Seminoles.

After a fine year, the Florida Gators will find themselves venturing forth to the Tangerine Bowl. With the large Florida crowd behind them they have a good chance of heading back to Gainesville as winners.

On the other side of the coin, the NFL crept a little closer to the play-offs.

This week like the last few weeks was not without its excitement.

There were very few games which could be termed upsets. The Eagles rental number one after rolling over the Redskins 28-30. New Orleans once again lost so they still claim ownership to the worst record in the NFL, without a single victory.

With a loss for Detroit, Minnesota was able to move into a tie for first after defeating Tampa 38-30, go Minnesota. See you later Tampa Bay.

That's it for this week. Next week some final predictions for the NFL playoffs.

First annual ski fest nets washed out

The first Annual Fall Water Ski Festival between ERAU and Stetson University was cancelled because of bad weather last weekend.

The festival will be held this Saturday, Nov. 22 at Lake Sixma in Deltona. Directions to the lake are available at the Student Activities Office.

Because of the extra planning time available there will now be volleyball and tug-of-war contests included in the day's activities as well as the skiing and rafting events.

All are invited to come out for a full day of fun. Rafting teams from Riddle and Stetson can register at the lake beginning at 9 a.m.

The festival will be held every three months, and so far, Johansen has placed in it each time.

Those of you who are into basketball, should try to beat Johansen's current record next trimester.

Start practicing now!

Hot shot winner

Donald Johansen proved to be a hot shot at basketball, by winning the Hot Shot Contest with a score of 36 points in one minute.

This event is held every trimester, and so far, Johansen has placed in it each time.

Those of you who are into basketball, should try to beat Johansen's current record next trimester.

Start practicing now!

Don Johansen

Radio

(Cont. From Page 5)

It's a lot of supportive work.

For example: in local radio somebody has to cut these commercials, our DJ's spend three or four hours on the air then have three or four hours of commercials to do. It's not as easy as it sounds. But it's addictive in that once you've gotten radio in your blood it's hard to do anything else!

Now that cooler weather is upon us, it is a good idea to review procedures relative to cold weather aircraft operations. Improper engine starting procedures can cause dead batteries, burned out starter motors and even a fire. Fortunately, cold weather operations in Daytona aren't as severe as they are up north, but there are some things to do to prevent some of the problems mentioned above.

With a cold engine in warm weather, two strokes is sufficient. In cold (sub-zero) weather, as many as 10 strokes may be required prior to cranking and more after cranking. It is also necessary in sub-zero weather to prime the engine by pumping the primer while manually pulling the prop through.

For standardization purposes, the following table can be used assuming a "cold" engine (a "hot" engine is one that you cannot hold on to the oil dip stick), and continue priming while cranking the prop.

All in all I was honored by watching a professional doing his job and enjoying it; may we all have the same life.

Stihs 4 remain the team to beat in Riddle bowling league

By Laurie Ranfus, V.P.

We now have the eighth week of bowling completed, bringing the banquet only 25 weeks away. We will be asking a fee of \$10.00 per guest for the banquet. This includes the meal and all the beer they can drink (till it lasts). We will be having a "Cash Bar" for all those who prefer mixed drinks.

The lanes at LaPaloma seem to be broken-in, which has made for easier bowling. This showed up on a lot of the score sheets. This week's high women's game went to the league treasurer, Manjue Rogers from Team No. 5, The Unknowns. She bowled a great game of 193. For the men's high game, Paul Wallace from Team No. 19, Stihs 4, had a fantastic score of 224.

This week's standings are as follows:

TEAM STANDINGS		
19-Stihs 4	25-7
13-Dead Beasts	22-10
18-Fire in the Hole	21-11
15-Lancers	20-12
17-LSD	2012-16725
5-Unknowns	199-129
3-DNGN	19-13-16793
12-AHP II	19-13-16310
14-Final Glade	17-15
7-Three on One	16-16-16678
8-Snowblind	16-16-16619
10-Laughing Matter	16-16-16451
16-Gang Green	15-17-17233
6-Crash & Co.	15-17-16233
7-Tequila Sunrise	14-18
20/Even Odds	13-19
2-Fliers	12-19-1996
22/All Signs	12-20-16635
11-Bliss Chips	12-20-16259
21-Bowery Boys	11-21
9-AHP II	9-23-16463
1-Loafer	9-23-15781

John Meidal

low pay of their positions - mostly commercial flight instructors.

With the keen competition and knowledge required for the job market, Mr. Smith's lecture was a helpful one and FAPA appeared to many students as an extremely helpful job search service at only \$36.00 a year.

FAPA (Cont. From Page 1)

ing for the higher pay of the airlines, he also stated that agriculture pilots worked "in a growing field."

The FAPA president showed the audience where a number of Embry-Riddle graduates were working and what they thought of their jobs. Many graduates were surprised at the

In addition to using the primer correctly, the prop should be pulled through by hand on cold mornings for the first flight of the day. This limbers up the cold-old and will release the starter of much of the initial load. It should always be remembered that the prop should ALWAYS BE TREATED AS IF IT WERE HOT all the time. The aircraft should be pulled and checked and all switches should be off. Remember that a broken "P" lead on a mag or ignition switch could cause an engine to fire, even though the switches are off. If your instructor has not shown you how to do this, ask him.

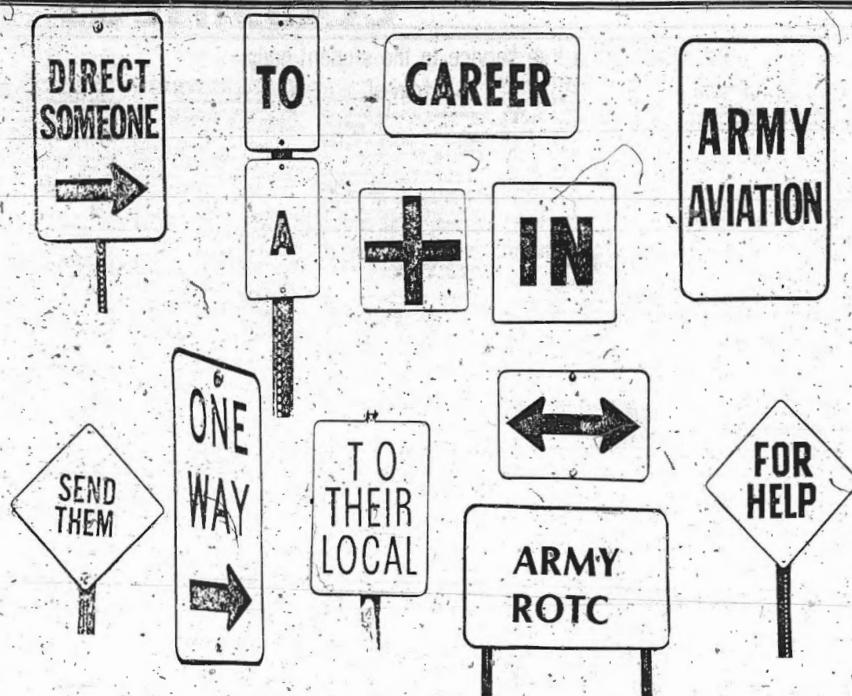

Now that we have the engine started, there is something else we need to be clear on. Remember how sticky we are about proper dress for flying? Well, there is a good reason for it and in the winter it is even more critical. The reason for the stringent dress requirements is in the event of an off-airport forced landing, you must be dressed sufficiently to protect yourself from the elements.

People have died from exposure following a forced landing in which no injuries were sustained, EVEN IN FLORIDA. Know what the temperature forecasts are and dress accordingly (or have a coat/airwear, etc. with you).

You would be wise to read up on cold weather operations - using your pilot operations handbook. Procedures will differ from airplane to airplane - know what is required for your airplane for the conditions present. An informed pilot is a safe pilot.
