

EMBRY-RIDDLE

VOLUME II NO. 4

MARCH 3, 1961

FIVE CENTS

STUDENT BODY MEETING

The second student body meeting was held in the Knight's of Columbus Hall. The meeting was a success even though the attendance was low. It was the usual crowd that attended; the ones that are interested in the school and their future. The students that are doing something for the school and making something of themselves were there.

Mrs. McCarthy presented Gary Ruppert with a mathematics tables handbook for his outstanding achievement in math this term. Gary has had all one hundreds on his tests so far.

Mr. White presented James Gelespy with a chemistry and physics handbook for outstanding work done in Physics this term.

The handbooks were donated by the Chemical Rubber Company. The books will have the men's names engraved on them. Congratulations to both men.

The heads of the various organizations of the school talked about what their groups have done and what was planned. Everything pointed toward building a better school.

--Jim Taylor

"APRIL FOOL DANCE SCHEDULED"

You've asked for it, so here it is. The Combined Student Organizations are sponsoring another dance. Since the dance is scheduled for April 1st, theme of the dance will be April Fool. The price has been set at \$2.00 stag or drag and it will be held at the Fireman's Hall. We will again have entertainment and door prizes. Those that were at the last dance know what a good time was had. Those that weren't at the last dance will surely want to come to this one.

--Jim Taylor

ANOTHER DAY - ANOTHER CHARTER

Last Wednesday, ER's Rifle and pistol Team received its Charter from the NRA. This makes the team a full fledged college team with the right to enter in matches with other colleges.

A request for M-1 rifles, .45 automatics and ammunition was mailed to the government upon receipt of the Charter. When these arrive we will have the major portion of our equipment.

Arrangements have been made with the Trail-Glades range to store weapons on range property.

Meetings are held every Monday at 9:50 AM in Room 2. Practice is held at the Trail-Glades range on Thursday afternoons and Saturdays.

There also seems to be an interest in a skeet and trap team. If anyone is interested please come to the meetings. The team is in a position to make all phases of shooting quite inexpensive.

--Al Richmond

SIGMA PHI DELTA

The next meeting of Sigma Phi Delta will be held on March 12, at Ed Hauser's house.

Thomas Langley was elected secretary to replace Bob Liddiard who resigned last week. Bob gave up his post as secretary to be able to devote more time to his studies and family.

--Jim Taylor

After a losing streak at poker, Chico Marx wrote to a playing-card manufacturer: "Gentlemen, are you still manufacturing aces and kings?"

NORTH AMERICAN AVIATION

Familiarly known throughout aviation as the firm which has built more airplanes than any other company in the world, North American Aviation, today is also well known for its leadership in the field of advanced weapon systems, space technology, guided missiles, electromechanical products, rocket engines, and nuclear reactors for the peaceful uses of atomic energy. North American was started in 1935 in Dandah, Maryland, with a small plant and 75 employees. Led by J. H. Kindelberger and J. L. Atwood, now Board Chairman and President, respectively, the small firm soon was an Army Air Corps' competition for a new trainer and then for an observation plane. By 1936, North American's employment had risen to 150 persons, with a backlog of almost \$1 million, which was very large for those days. The firm moved to Los Angeles. In 1943, they employed 91,000 people and utilized 8,573,835 square feet of floor space. From Jan. 1, 1939 to Sept. 30, 1945, the firm made a total of 42,683 military aircraft, including 15,300 F-51 Mustangs, more than 15,800 T-6 Texas Trainers, 9,820 B-25 Mitchell Bombers and 966 B-24 Liberator Bombers.

F86 Sabre Jet helped to win the Korean conflict. Their F-100 Super-Sabre is now in production. North American Aviation also is in charge of the X-15 program.

LETTERS TO THE EDITORS

I object to the article "What is Education", by Al Richmond, which was published in the last issue of the JETSTREAM.

Mr. Richmond is of the opinion that one must be able to converse properly, so that at parties and other social functions, one can convince others of one's "true worth". Mr. Richmond is also quite clear in that he thinks that this sort of thing is required for promotion, and therefore we should all learn these skills by attending school dances.

Where, I should like to ask the co-editor of the JETSTREAM, is the place of the man who thinks that his self esteem is dependent upon his own determination of his worth, not that of others? Where is the man who thinks that he can convince his superiors that he is worthy of promotion by PRODUCING, not telling?

Unfortunately, it is true that by "brown-ing up the boss" (I am among the more ignorant I call it that!) a man can sometimes receive a promotion. Probably, this happens often. Many men are promoted more for their golfing skill, than for their skill with a slide rule. All we have to do is look around and note the number of people who are incompetent at their jobs. Most of these men, undoubtedly, live by the promise "It is not what

FROM THE FLIGHT LINE

Another two weeks have gone by and more of ER's birdmen have gained the legalities of the realm of flight. Roger Ferrel came through for his flight instructor and multi engine ratings. David Arnold and David Southern are also qualified for multi fans. Richard Parker now has his instrument rating. We have many men with a commercial license this time. They are: Calvin Arter, Fairley Gay, Rex Lamb, David Low, John Moss, Richard Papera, Gary Shutty, Robert Swanson, James Stonebrook, Alex Wilhelm and Ronald Willey. And last but not least is Clark Wright with his newly acquired private license. Congratulations men.

We regret to say that instructor Elbert McGregor has left the flight line for a position as a FAA flight inspector in Louisville, Kentucky. He has been with ER for the past 1½ years.

We'll miss seeing his Scotch tartan shirt on the cold days. We all wish him and his shirt the best of luck in the future.

--Brooks Partridge

DOWN THE GUTTERS

with BILL KNAPP

They say old news is better than nothing, or something like that, so here goes. Our first bowling season ended January 16 and the following persons were presented with their trophies: The winning team consisting of Carl Digiacomo (Capt.), Lynn Ellis, and Joel Fernandez, Frank Winters had High Scratch of 571, Mr. Biondo had High Scratch game of 211, Raymond Pepe had High Handicap Set of 678, Dave Valley had High Handicap Game of 267, and due to a finagle factor I threw in, I had high average of 172. Unbeknowing to the second place team consisting of Raymond Pepe (Capt.), Wayne Young, and Charles Niemann I had bought three second place trophies but since none of them showed up I decided to keep the trophies. Cont. pg. 3, Col. 1

GUTTERS Cont. - I was real proud of myself with these four newly acquired trophies until my friends kept asking me why I had three trophies that didn't belong to me, and when I said that they made a mistake at the engravers, they looked at me a little sceptical. So I decided to give them to the proper persons at the assembly Friday.

This semester Frank Winters leads with a high average of 173, and high scratch set of 355, Mr. Claflin has high scratch game of 219 and high handicap game of 259, and John Millar has high handicap set of 639. J. Millar bowled his high set at a good time, the week we bowled for the traveling trophy, and he, along with E. Harkins the winner of last week will have his name engraved on the trophy.

Until next week see you all at the alleys!

* * * * *

LETTERS Cont. - you know, it is who you know". They have made a study of patronization, and obsequiousness. They have gained their promotions and recognition. But what have they not gained, and what have they lost?

First, remember this; if promotion and recognition is gained on the basis of "telling", there will come a time when there is no one else to tell. Inevitably, there will come a time when you will have to produce. And if you can not, then "who is kidding who"? The country is full of washed up executives who whine about the fact that they did not know enough of the right people, that they did not have enough "pull". They degrade the men who decided that a productive and creative life was a value and worked at it. They condemn the men who worked long hard hours, the men who produced, and call them "boot lickers". Their favorite expression is "Who the ___ is HE trying to impress!"

The chances are, he was not trying to impress anyone!

It would be absurd to state that we do not need other men. We do need a great many things that other men can offer. We need the skill of a doctor if

we wish to be cured of an illness. We need the skill of an electronic engineer if we wish to enjoy a television set, for it would not have existed without him. We need the skill of thousands of men if we wish to have steel, because we can not produce steel alone. But what we take from them we replace, value for value. If a man takes a painting, the result of the creativity of an artist, he trades for it money, the equivalent of his own creativity in another endeavor. We do not trade for the painting the recognition of the painter's "true worth". The recognition is implied in the purchase.

I wish to state to Mr. Richmond that the man who said to him "I haven't got time to spend on any of these social activities you've got here. I'm here to get an education." is the man I wish to know. It is with him that I could trade, value for value. He is the man who knows that his career, and his self esteem, his own sense of his own worth, will depend on what he does, which depends on what he knows, which depends on what he learns.

--Leslie T. Brown

* * * * *

Mr. Brown:

We thank you for your interest in the editorial "What is Education". Your grammar and style are above reproach. I have only one criticism. Your comment and my editorial have two different views of thought. Where I deal with socializing as a part of business, you treat it as a major portion and condemn it. You quote as if from a thorough knowledge of "browning up the boss" so I will not refute your statements. I do regret that you took this narrow view of it.

You can consult any educator or personnel representative and they will tell you that more and more emphasis is being placed on an employee's ability to maintain a favorable social standing with the people around him. What do you think the humanities in the BS program are for? They are there to round off your education and provide you with this ability. Social events in a school are designed so that you may apply this ability.

It is true that some people gain their promotions by their study of patronization and obsequiousness. These are not the people I was referring to.

A PAGE FROM THE DIRECTOR OF AERONAUTICAL ENGINEERING
TO THE STUDENTS IN THE ENGINEERING DIVISION

LET'S FACE FACTS

What was your main purpose in coming to Embry Riddle?

You came to Embry Riddle to get a good education in an ECPD accredited curriculum in Aeronautical Engineering Technology in 2 years that will enable you to go to work at a good wage in the engineering end of the Aeronautical or Missile industry. This should be your main purpose, anything else should be incidental. From the facts available, you can be reasonably sure that you can reach this objective.

With the last graduating class (last December) we had 100% placement at good salaries with an average of three job offers per man. Our first BS class graduates this April and we expect that they will receive even better offers. It should be kept in mind that the AS men graduate in two years (and the BS men graduate in 2 years and 8 months). This means that they are out in industry earning money during the next two years while the student who is attending a 4 year university is still going to school, spending (not earning) money.

It should be apparent that for the student who does not have unlimited funds for his education, the 2 year course at Embry Riddle offers a decided financial advantage. Also, from the success of our past graduates in industry, it is apparent that our graduates gained their objective of getting a good education in an institution of higher learning.

With the above being admittedly the main purpose in coming to Embry Riddle Aeronautical Institute, we recognize that other things are of secondary importance. With the heavy study schedule, less time is left for outside activities than on some college campuses. Of course, we have no intercollegiate sports, but there is a growing list of sports that are available to the students. Two new fraternities (more professional than social) have recently been chartered. The Student Council and the combined student organizations are initiating many activities. Dances for the whole student body, a newspaper and an annual are some of the activities that are being worked on. We feel that these are good signs and encourage them. Some students can participate in these activities without jeopardizing their studies. Others, the slower students, would be wise to concentrate on their studies. Above all, don't forget your main purpose in coming to Embry Riddle; TO GET AN EDUCATION!

-- Robert M. Claflin

PROFILE OF OUR NEW DIRECTOR OF ADMISSIONS - Foster E. Alter

Mr. Foster E. Alter has recently been appointed Director of Admissions. Mr. Alter's A.B. and M. Ed. were awarded by the University of Miami, although he did additional graduate work at both Columbia University and the University of Pittsburgh.

Mr. Alter was Dean of Men at the University of Miami for 17 years and participated in the growth and development of that institution. His career at the university actually began in the Admissions department. For the past five years he has been in the investment trust business.

Mr. Alter says of his coming to Embry Riddle, "I am extremely pleased to be back in education and particularly pleased to be with the growing and vibrant Embry Riddle Aeronautical Institute."

We welcome Foster Alter to our institution. He brings to us multi-faceted experience which should prove useful to Embry Riddle.

-- Robert M. Claflin
