FOUR TIME WINNER

Buddy Baker's unlucky #71

The Engine of Buddy Baker's car was sputtering. As he was about to go, Richard Petty #43 pulled the lead. After the start of the race, Buddy Baker took on an early lead with Carl Hekeborn hot on his tail. The two of them began to pull away from the rest of the cars.

The reason for the increase in speed was the "drafting effect." Two cars when "drafting" will increase their speed about 2-3 miles per hour over that of a simple car. When "drafting," one car rides in the vacuum of the other car, about 5 feet or less.

The Chevy that Carl was driving was fast, but just didn't have the power to pass Baker. The first pit stop was uneventful, and the three cars, fell back into line positions. Of great significance, at the end, especially, was the fact that Baker's stop was longer than Petty's or Carl's.

Ten laps from the end of the race, the two cars, Petty's and Baker's, came into the pits. They took on just enough fuel to finish. Baker came out of the pits 7 seconds behind Petty. Baker blew his engine, trying to catch up to Petty. This gave Petty a two lap lead over the second place car.

Mr. George Brown, a professor of psychology, has been interested in the effects of hypnotism and the subjective or subconscious mind preprogramming.

For the 3rd straight blood drive, Delta Chi took the percentages of brothers donating blood and won the trophy for total number of pints given in their name.

Last week's blood drive was held in the old ERAU library which is now the new ROTC building. If you stop by the student center on Thursday or Friday you would have noticed the blood drive truck.

There are six stages of hypnotism, explained Mr. Brown, and in the deepest three stages the conscious and subconscious may alternately be in control.

The mind is in the most receptive state to acceptable post-hypnotic suggestions when the subconscious is in control. Although the person believes that he is aware of everything, the hypnotist is free to give any suggestion he sees fit.

Mr. George Brown, a psychology professor, was invited by Professor Nelles to speak about hypnotism and its relationship to psychology.

The interesting and informative discussion was climax by a demonstration as Mr. Brown led psychology, sociology, and personality development students into the relaxed physical and mental state of hypnotism.

The hour of hypnotism with Mr. Brown dispelled many of the common fears and misconceptions about hypnotism. Some fear that the hypnotist has total control of the subject's mind. Mr. Brown explained that this is not true. The subconscious mind will reject any suggestion it finds unacceptable to normal behavior for that individual.

Almost no people, if alone in a deep hypnotic state, would be able to see, hear, or do anything. The security and comfort of hypnotism too much to give up and are somewhat difficult to awaken.

A licensed hypnotist can remove pain on referral from a doctor. This has proven effective for minor surgery on people who react unfavorably to anesthesia and/or easing the last days of persons with terminal diseases.

Mr. Brown's professional practice is located in Holly Hill and he periodically conducts classes in self-hypnosis.
President's Corner

All we in the SGA ask is that you attend, have a good time, and stay out of the ER AU. I'll see you around 8:30 P.M. next Saturday.

Next week seniors make a couple of very important choices.

First is leadership selection. The present system? There is no system. In other words, if you hold an election whenever they get around to it, set their own rules for that election and forget it until everyone graduates.

Look at the present situation, or those last days, it's only Jerry Fry remains. When he graduates no one will have any idea what has been done in this area.

Under the new system EVERY Trim during sophomore, junior, and senior class vice-president is elected. If Jerry Fry spends one trimester learning what, when, where, and how much, then one trimester teaching a new V.P. while planning his graduation. Vote for it!

Second item on the ballot is do you want a small private party every trimester or a huge gala once a year. The difference between band and booze for 150-200 is really insignificant.

The larger party will not only exceed the cost of the band further but the room choice of places is very limited. The small party will give a larger choice of places and might even use the ballroom, cutting the cost of a place to zero. Another consideration is do you want to have one last chance for graduating friends or another (although slightliesmall) SGA dance. To me, it's all the same.

Once again, let me say that all mixes, entertainment, and facilities are offered to ERAU students free.

**THINGS TO DO MOVIES**

by Marvin Stokes

Big Ten Day: "A Miracle with My Aunt" starring Maggie Smith, best actress winner for "The Prime of Miss Jean Brodie," has been nominated for that award again for this role. This is a story about a lady who brings style, grace, and beauty to the ancient arts of nemogling, gamboling, and hustling. (PG)

Cinema: Jack Lemon is at his best in "Avanti," a lovely Juliet Mills providing same. (R)

**A LOOK AT HUNT**

Jack Hunt, President of Embry-Riddle, is a busy man with a demanding job that requires much time and work.

One of his most important jobs is that of public relations. His schedule always includes an assortment of appointments with VIP's to show his importance to the university. It is necessary that he give a good impression of the university, and boost it's public relations. This Mr. Hunt says, is the hardest job.

As far as his opinion of the college Masses are concerned, he feels it has come about as he expected. From just a hanger in Miami to one of the larger universities, he is very pleased. However, he says he's still working hard and trying to improve his methods and new ideas for improvement of the school. Along the way, he hopes Embry-Riddle will remain the same as it is, retaining the Nellis tradition that enable it to become the finest educational institution in the country.

Outside of university business, Mr. Hunt enjoys swimming, body surfing, and playing the guitar. His first love is flying, holding a private pilot's license and land certificate with an instrument rating. Along with his private certificate for airpplane, he holds a commercial ticket in lighter that air air-

by Dan Burke

Commander Aviation, Inc., is scheduled to operaition at Ormond Beach Airport, is utilizing the skills of several Embry-Riddle graduates. According to Greg Weiser, an April, 1972 Embry-Riddle grad and president of Commander Aviation since November, the company plans to draw future students from the university, and other potential candidates. "Weiser also said that the company is currently operating a cooperative education plan for students at the university being investigated. "The idea is that Embry-Riddle students may be able to work for the college credit while obtaining on-the-job training with Commander."

Maintenance department is under the direction of Frank Isett, and Mrs. Holmes a recent addition to the maintenance staff. Both man 1972 graduates of the Embry-Riddle Flight, frames and Powerplant mechanic program. Steve McDonald, currently student at Middle, serves as a part-time flight instructor and night superintendent.

Weiser said that Commander's future plans also include certification under the new Part 135 regulations, which will allow air-

Riddle Grad's Doing Their Thing At Ormond Airport

**THE DAYTONA PLAYHOUSE**

The Daytona Playhouse has announced that its Friday, March 2 will be the night of "The Horse's "Come Blow Your Horn."" This is an uproarious contemporary comedy that everyone should enjoy.

by Steve Hagan

We had a talk with Steve Hagan, mechanic, revealed that, cost everyone, ground crews and pilots, enjoy his work with a Goodyear. While on the ground, the mechanics job is to see that the airplane is in good condition and ready for flight. The mechanics checklist includes many technical duties which must be performed. Among these is a statement saying the mechanic is responsible for turning on the flood lights at night and positioning them in a way that the Goodyear sign is at its best advantage.

The Goodyear blimp are at home base for 6 months, and the other 6 months are spent on tour, making appearances at important events. While at home base, if you are in the area, you can obtain rides at $1.00 for adults and $2.50 for children, lasting about thirty minutes.

There are several theories as to the origin of the name "Blimp." One of them is that a B. Cunningham of the Royal Navy Air Service, was inspecting the bumpy, hit his head against it, then initiated the sound, "Blimp." Dirigibles, Airships, blimps, even Great Grey Elephants, you may call than what you wish. We were able to see one of the few still flying today. One day there may not be any more, but they shall always be remembered as an important part in the beginning of aviation, starting a whole new field which we at Embry-Riddle are involved.

by Jeff Saucha

Last Friday offered Embry-Riddle a special treat. If you happened to be around campus at about 6:00 pm and looked into the sky, you couldn't miss it. With the speed of a turtle, and the grace of a flying elephant, the 160 foot long Goodyear blimp came soaring over the tree tops, floating down to a gentle landing behind the dormitory.

The great airship is an annual visitor to the area during the Daytona 500, however, she did arrive several days later this year. The blimp is one of three owned by Goodyear. Our visitor was the Mayflower, which is based in Miami, and the two others are the Columbia and the Americus, which have bases in Houston and Los Angeles.

The Mayflower is the smallest of the three. It is 266 feet long, 98 feet high and 51 feet in width, and contains 927,600 cubic feet of gas and air.

The weight of the Mayflower is about 4,200 pounds. When inflated with helium and air, it weighs approximately 50 pounds on takeoff.
